EDUCATION

University of California, Berkeley

January 2026 - Present

Master's in Information and Data Science

Berkeley, CA

- **Relevant Coursework:** Data Science Programming (Python), Research Design and Applications for Data and Analysis, Data Visualization, Statistics for Data Science

University of California, Los Angeles

Jun. 2024

Bachelor of Science in Statistics and Data Science

Los Angeles, CA

- **Relevant Coursework:** Statistical Programming (Python & R), Statistical Consulting (Capstone), Probability Theory, Data Mining, Machine Learning & Optimization, Data Analysis & Regression

TECHNICAL SKILLS

Programming & Tools: Python, R, SQL, ETL pipelines, VBA, Power BI, Tableau, Excel, Power Query

Data Science & Machine Learning: Predictive Modeling, Sentiment Analysis, Random Forest, Classification, A/B Testing

Statistical & Analytical Methods: Regression Analysis, Time Series Forecasting, Hypothesis Testing, KPI Metrics, Risk Analysis, Reporting Automation

EXPERIENCE

Quality Analyst

Jul. 2024 – Present

RK Logistics Group

Newark, CA

- Built a driver allocation risk model, **saving \$400K** in annual operational costs.
- Identified compliance gaps and **saved \$15K** in corrective strategies through warehouse temperature analysis.
- Prepare and analyze operational performance metrics to support multiple Quarterly Business Reviews (QBRs), providing accurate data-driven insights to customers and leadership
- Launched company's Net-Zero initiative (Scope 2 emissions), with active planning underway to expand into Scope 1 and Scope 3 emissions tracking and reduction
- Apply ISO 9001:2015 quality management standards during internal audits of **10+** operational departments, evaluating process efficiency and identifying areas for improvement
- Created and maintained Standard Operating Procedures (SOPs) and Standard Work Instructions (SWIs) to standardize processes and ensure consistency across operational departments

Data Analyst Intern

Jun. 2023 – Aug. 2023

Elcon Precision LLC

San Jose, CA

- Enhanced production **60%** by establishing **SQL** queries to extract key data from ERP and operations systems.
- Boosted data accuracy and transparency by rebuilding scheduling and reporting systems for sales and operations.
- Increased operational efficiency by **50%** through consolidation and automation of production schedules.
- Improved decision-making and efficiency by aligning data strategies with multi-operational goals.

PROJECTS

NIH Grants Termination and Freezes | *Python*

Aug. 2026

- Design and develop an interactive visualization website deployed on **Vercel via Flask**.
- Created choropleth maps of disrupted, terminated, reinstated, and still-terminated grants rates using **Python Altair**.
- Collaborated in a 5-member team to visualize groups that are losing public funding.

Sentiment & Classification Analysis — Bias in News Reporting | *Python, R*

Mar. 2024

- Scraped 2,000 articles from CNN and NY Post using **Python (Selenium, Scrapy)**.
- Leveraged R's Syuzhet for emotion detection on political articles, uncovering sentiment patterns from 2023-2024.
- Conducted content classification and sentiment analysis using Python and R to evaluate consumer-facing narratives, revealing engagement trends across media categories.

Predictive Modeling — Alcoholism Kaggle Competition | *R*

Nov. 2024 - Dec. 2024

- Achieved Top 10 Kaggle ranking by developing classification models on 100K+ observations.
- Imputed missing data using R's Hmisc package (Additive Regression, Bootstrapping, Predictive Mean Matching).
- Optimized an XGBoost model, achieving **73.28% accuracy** in predicting alcoholic status from health records.
